FOR IMMEDIATE RELEASE

Polymer Supplements Molding Capacity with the Addition of a New Engel Molding Machine

Leola, PA, January 9, 2012 – Polymer, a leading custom injection molding company in Pennsylvania, is adding further machine capacity in their upper tonnage range to support a strategic customer. The recent addition of a new injection molding press having a clamp force of 500 tons will be qualified and operational by January 23rd, 2012.

The investment is being made for a key customer that is a leader in the industrial material handling market. The new product line will be primarily produced using 3 multi-cavity stack molds. In addition to the 500 ton Engel Duo 3550/500, the investment includes additional support equipment including multiple Gammaflux hot runner controllers, multiple Advantage water temp control units, Novatec insulated material hopper and miscellaneous conveyors and water handling equipment.

Interestingly, the molding machine is manufactured in two Engel facilities 4350 miles apart. The injection unit is manufactured in Austria and the balance of the machine in York, Pennsylvania.

Polymer's reputation for high quality, cost effective manufacturing solutions has been key to continued growth in many of their prime markets including Industrial, automotive and healthcare. John Wolf commented that it is not unusual for Polymer to make investments in equipment for our customers' economically feasible projects.
