FOR IMMEDIATE RELEASE

Polymer Creating Jobs with the Addition of a Second Shift to the Secondary Operations Department

Leola, PA, December 21st, 2013 – Polymar, a Pennsylvania custom injection molder and contract manufacturer is putting on a second shift in the Secondary Operations Department as a result of steadily growing business. The precision molder is committed to supporting their customers’ needs through extended utilization of their existing assembly stations and equipment. Adding a second shift increases utilization and can reduce the payback on capital equipment investments required for assembly.

The addition of a second shift will double the available capacity for assembly and value added services. In addition to new hires required, there has also been opportunity for existing employees to advance. The Secondary Operations Department is responsible for the shipment of a little over \$1,000,000 and has been steadily growing.

After the new positions have been filled, two weeks of training will be scheduled in the beginning of January with the second shift expected to be completely operational by the beginning of March.

Polymer’s ability to provide assembly and value add services has been strategic for continued growth, supplying kits and sub-assemblies to many of their prime markets including Industrial, automotive, healthcare, electronics and fluid transfer. Polymar has plans to add a third shift in the Secondary Operations Department in the near future.
